CULTI CAM 3D

Simplified steering for row crop cultivators

Pivot or slide steering hitch available with Culti cam

Working in row crops requires precision in order not to damage plants and provide optimum weed control at the same time. INNOTAG offers CULTI CAM 3D for automatic steering row crop cultivators. The system is able to perfectly detect crop rows and compensate for deviations and inaccuracies. With the ability to position the cultivator within a few centimeters, optimal weed control with minimal crop damage is ensured.

CULTI CAM 3D capabilities

- Recognize green, yellow, brown and blue crops on brown/black background
- 0.05 to 15 km/h operation (0.03 to 9 mph/h)
- 2-3 cm accuracy (1 inch)
- 3D mode detects the row when a minimum difference of 12 cm (5 inches) between crops and weeds. Ideal in very high weed conditions
- Row spacing between 5 and 36 inches
- Night operation with light kit option
